Subject: Energy IoT Solutions Architect Fellow

Dear 10Power Team,

I am writing to express my interest in the Energy IoT Solutions Architect Fellow position at 10Power. As an Embedded Systems & IoT Engineer passionate about renewable energy and community empowerment, I am deeply inspired by your mission to achieve 100% Renewables for 100% of Humanity and your commitment to energy sovereignty and climate justice for Indigenous communities and underserved populations.

I have hands-on experience designing and building intelligent energy systems using ESP32 microcontrollers, MQTT telemetry, and real-time control systems. My background in Embedded Systems & IoT directly aligns with your need for someone who can help design and build Front-of-Meter and Behind-the-Meter energy control systems.

I understand the full stack from sensor integration and firmware development to backend data infrastructure which is essential for building reliable, scalable renewable energy systems that communities can own and operate. I have strong Python skills for scripting, data analysis, and automation, critical for processing energy data, optimizing system performance, and creating tools that your team can use to monitor and manage renewable energy infrastructure. Whether it's analyzing energy generation patterns, automating control logic, or building data pipelines, I can contribute immediately.

I'm excited about the possibility of joining 10Power's dynamic team and contributing to a future where renewable energy is owned and operated by the communities it serves. I'm eager to learn, take initiative, and help advance your vision of energy justice for all.

Thank you for considering my application. I look forward to discussing how I can contribute to 10Power's mission.

In solidarity,

Shadrak BESSANH
