Subject: Ecological Software Developer Fellow Application

Dear Regen Network Development Team,

I am writing to express my interest in the Ecological Software Developer Fellow position at Regen Network. As a creative, self-directed Full-Stack Developer passionate about building tools that drive ecological regeneration, I am deeply inspired by your mission to create The Operating System for Ecological Regeneration and your commitment to empowering communities to measure, verify, and scale regenerative impact.

I have hands-on experience designing and building comprehensive software systems from frontend interfaces to backend APIs to real-time data pipelines. My background in building production-grade applications directly aligns with your need for developers who can experiment, play, build things, and ultimately publish software tools and documentation that support ecological impact integration. I understand the full stack required to make developer tools accessible and powerful.

I am fluent with Claude Code and use it daily for rapid prototyping, iteration, and deployment. This aligns perfectly with your requirement for developers comfortable with Claude Code or equivalent. I leverage AI-assisted development to move quickly from concept to working prototype to production-ready code , exactly what you need for building an SDK

I'm ready to dive into the technical challenges of building an ecological SDK, experimenting with new approaches, collaborating with land stewards and scientists, and publishing tools and documentation that support the broad world of regenerative impact. I'm excited about the possibility of helping Regen Network democratize access to ecological data and impact verification tools.

Thank you for considering my application. I look forward to discussing how I can contribute to Regen Network's mission.

In regeneration,

Shadrak BESSANH
