Subject: Technology Fellow Position Application

Dear Pollinate Group Team,

I am writing to express my strong interest in the Technology Fellow position at Pollinate Group. As a full-stack software developer passionate about building tools that empower underserved communities, I am deeply inspired by your mission to support marginalized women entrepreneurs through accessible mobile technology.

I have extensive experience building production grade Python backends with FastAPI and Flask. I'm comfortable with async/await patterns, real-time data processing, and designing scalable APIs. This directly prepares me for Pollinate Group's Python Lambda functions and backend architecture.

I've built multiple React 18+ applications with TypeScript, understanding modern component patterns, state management, and responsive design. React Native is a natural extension of this knowledge the component model and JavaScript fundamentals transfer directly, and I'm eager to learn the mobile-specific patterns . I've designed and implemented REST APIs for third-party integration, handled authentication, and integrated with external services. This experience directly applies to Pollinate Group's API-driven architecture and Salesforce integration requirements.

I'm ready to dive into feature ownership, learn React Native and AWS serverless services, collaborate with your product and design teams, and help build tools that enable women entrepreneurs to thrive. I'm excited about the possibility of contributing to Pollinate Group's mission while growing as a full-stack developer.

Thank you for considering my application. I look forward to discussing how I can contribute to Pollinate Group's mission.

In service,

Shadrak BESSANH
