EDUCATION

Université d'Abomey-Calavi, Benin

Programme: Bachelor of Science, Embedded Systems & IoT

Expected 2028

Academic Standing: Second Class Upper

Relevant Courses: System Architecture, Data Processing, Cloud Infrastructure, Real-Time Systems, Database Design, Network Concepts, Cybersecurity Principles, IoT Fundamentals

PROJECTS / ACHIEVEMENTS / AWARDS

- VoxiAI - Real-Time Video Processing System: Designed hybrid ML pipeline reducing processing time by 50%, implemented WebSocket infrastructure for real-time tracking, deployed analytics dashboard on cloud infrastructure Dec 2025
- Evolutics - Scalable Platform Infrastructure: Built complete full-stack system with Supabase cloud database, REST API infrastructure, and React frontend for aggregating opportunities from multiple data sources Feb 2026
- Fon-Dataset-Generator - Data Pipeline Infrastructure: Designed automated data generation pipeline with validation systems for language preservation project Feb 2026
- CV-AI - Privacy-First System Design: Architected privacy-focused application with secure backend infrastructure and A4 PDF export functionality April 2026
- Finalist in the DigitalID Hackathon, organized by ID4Africa and The Upanzi Network April 2026 May 2026

WORK EXPERIENCE

Backend Developer, Netcorp

2024-2025

- Implemented secure authentication systems and database optimization
- Collaborated with frontend teams on system integration and deployment
- Integrated security best practices in system design and implementation

LEADERSHIP EXPERIENCE

- Led development of Fon-Dataset-Generator project supporting language preservation for underrepresented cultures
- Mentored peers in full-stack development and system architecture concepts
- Contributed to open-source development and community-driven projects

SKILLS AND INTERESTS

Computer Skills - Proficient in Microsoft Word, Excel, PowerPoint

Languages - French (Native), English (Fluent)
